**Web3**, well who hasn't heard about it?

Crypto, Blockchain, NFTs, web3, and what not! Technology is giving birth to things we have never imagined of.

Every other person on the internet now talks about them - be it Elon Musk, Naval, or Gary Vee with “**Web3**” stealing the **spotlight**. But, what does this actually mean?

Let's look at what [@cdixon](#) has to say.

Every day people are coming out with something new, something still unexplored yet very fascinating related to this space. We all want to know whether everything said or done is true or just a pyramid of dreams.

*Besides all the skepticism, there must be something about this that's driving all the hype. Something that even big giants are getting into.*

## What is Web 3.0?

Do you realize how different the internet we use today is from what it was just 10 years back? The internet itself has undergone several shifts to become what we see today. But this is not the end.

Initially, when the web was introduced in the 1990s, it was just a static page where users could read the data.

This initial phase is marked as **web1.0**.

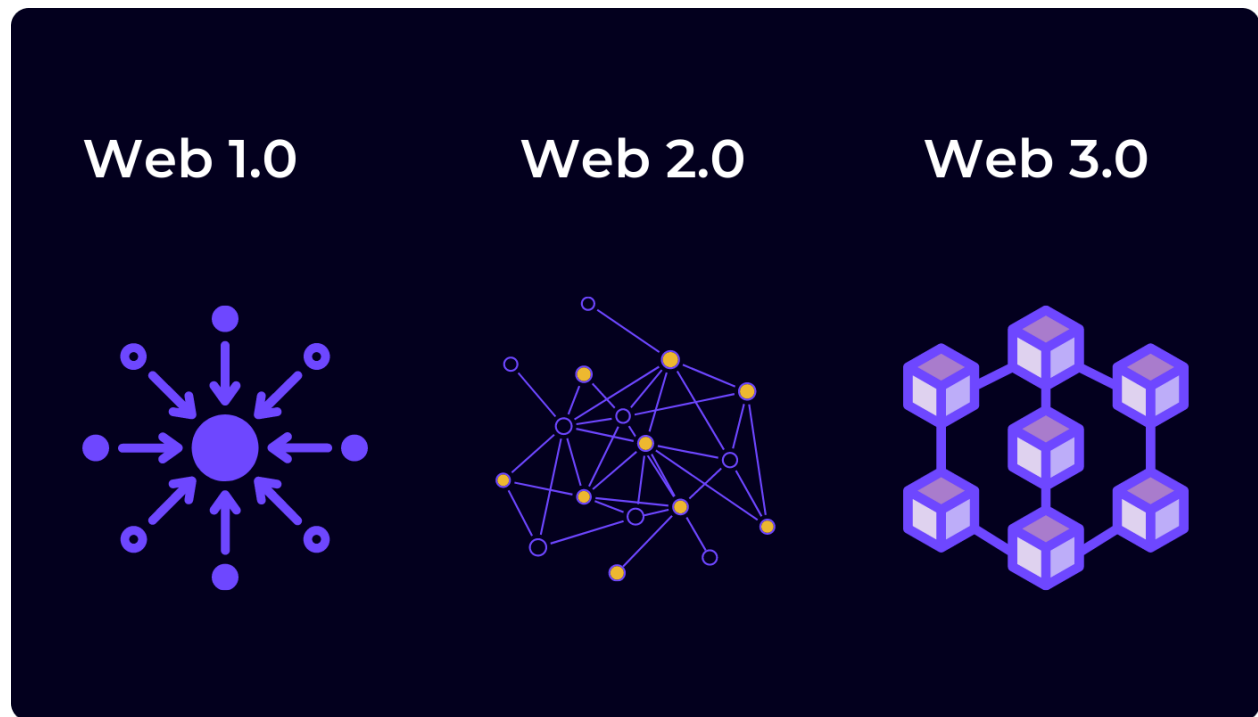

In the **2000s**, with the entry of big giants like Facebook, Instagram, and Google, this static page became more dynamic and also provided a space for communication where users can engage with each other. It became more centralized and companies became the owner of individual data. This is what we know as **web2.0**.

Then came **web3.0** which plays a game-changing role and aims at providing a user-oriented platform. It is a **decentralized** networking system that works on blockchain technology and provides complete ownership of the data to the user.

*We all want control over things that belong to us, right? And web3.0 is here to exactly offer this power.*

*So why would somebody want to lose it?*

Web3.0 is completely decentralized and **peer-to-peer**, i.e., there is no need for any middle man for whatever you do. It is much more liberal than the web we are presently using.

**Web3.0** is the next stage of the internet. It is-

1. **Transparent.**
2. **Trustless.**
3. **Permissionless.**

To learn more, here are some *great* resources:

This is gold- <https://www.web3creators.com/learn-web3>

You should definitely not miss reading the **Bitcoin Whitepaper** [here](#).

A video from one of the best channels out there- <https://youtu.be/nHhAEkG1y2U>

**Some people you should definitely follow in this space-**

[@VitalikButerin](#)

**How is web3.0 going to make a significant change in the future?**

Web 3.0 is referred to as the next phase of the internet. There is no central body that controls the data flow. Instead, there is community governance as online communities that have signed smart contracts come together and the governance is consensus-based. These governing communities are called [Decentralized Autonomous Organisations \(DAOs\)](#).

It is also opening the gates towards a whole new universe called [Metaverse](#). Metaverse promises a three-dimensional world where users can move around in their digital avatars.

**Decentralized Finance (Defi)** is another important aspect of web3.0, as it uses cryptocurrency and non-fungible tokens(NFTs). All the transactions are peer to peer and there is no middle man to facilitate the transactions.

Here's an amazing article on web3 use cases-

<https://medium.com/m25-vc/web3-use-cases-opportunities-6f060467cb2a>

*No individual grows overnight and if you want to establish yourself anywhere, you have to do the proper homework.*

Well, now that you have a basic idea about web3, why do you need to dive deeper?

**What does it have for you?**

### **1. For Creators**

Web3 is the future of the “Creator Economy”. You ask why?

As a creator, you can create and manage your content without having to depend on any “third party”. **How cool is that?**

Web3 for sure is going to take opportunities to the next level.

But, how do you exactly learn and leverage your skills? Refer to some of these cool resources-

A detailed guide for creators- <https://www.antler.co/blog/creatoreconomy2022>

Gary Vee on NFTs-

<https://youtube.com/playlist?list=PLfA33-E9P7FAcvsVSFqzSuJhHu3SkW2Ma>

## **2. For Developers**

Web3 for sure is going to take over most of the industries. And why shouldn't it anyway? It offers a sea of opportunities.

This is the best time to learn about how you can leverage your web2 skills and stay ahead!

**~ Learn web3 development/ resources for devs and programmers-**

Find everything you need as a Web3 programmer here (internships and jobs too!)-  
<https://web3.career/learn-web3>

**Few other resources-**

<https://academy.polygon.technology/module-1-getting-started/join-the-polygon-academy>

### **3. For Finance Geeks**

You already know the power of decentralization. How Trading and Investing can give rewarding benefits.

But, don't just dive in. DYOR!

***P.S. Wanna learn crypto trading risk-free and earn in the process? [Bricks Protocol](#) is here for you.***

**What tools can you use to explore crypto?**

Global Centralized Exchanges (CEXs)- Binance, Coinbase, KuCoin

Indian Crypto Exchanges- Wazirx, CoinDCX, CoinSwitch Kuber

Stay updated with all the latest web3 & crypto trends here- Decrypt | Cointelegraph | Coinmarketcap

You might be wondering, investing is always better. Why would you risk your money trading and lose it all?

**Very True!**

Even though people make lots of profit through trading, the process is not a piece of cake. It requires a lot of research, practice, and experience.

And, as a newbie, you are bound to make mistakes and just lose right?

**WRONG!**

You can actually **Learn & Earn, all at no-risk\*!** ;)

Learn and make “zero-loss”. Sounds unreal? Well, [Bricks Protocol](#) is here to bring you this exact experience.

Bricks Protocol facilitates Crypto Trading Experience through trading tournaments where users face zero risk & win actual crypto upon getting profits in virtual trading.

Interested? Dive into our [Discord](#) server & become a part of a community full of smart enthusiasts. 😎
